

Nature's Tears® EyeMist®
All-Natural Pure Water Mist
Supplements the Tear Film
No Chemicals - No Saline

Tear Film Layers:

1. **Lipid:** Thin top layer of oil that lubricates the eyelid and slows evaporation from the underlying aqueous layer.
2. **Aqueous:** Thick middle layer that is 99% water. Also contains electrolytes, antibodies and beneficial proteins.
3. **Mucin:** Thin bottom layer of mucus that adheres the tear film to the corneal surface.

Tear Film (3 Layers):

Just a Mist®

"TISSUE CULTURE GRADE WATER is high-grade water with no impurities or contaminants. To be rated 'tissue culture grade,' water is tested for the ability to support cell growth in a laboratory. The water should have a slightly acidic pH (5.5 to 6.5). Inorganic minerals essential for cell growth must be present in minute quantities. Heavy metals or salts are minimal or absent. Organic breakdown products and microorganisms are absent. The water is endotoxin free."

Julia Oxford, PhD

ENDORSEMENTS

"I have given a sample of Nature's Tears® EyeMist®, from Bio-Logic Aqua Research, to 10 to 15 dry eye patients a day for the last nine years (over 20,000 samples), along with samples of artificial tear drops from various manufacturers. Prior to Nature's Tears® EyeMist®, no other product generated nearly as much patient enthusiasm and no other product was as frequently described as 'the most effective available.' EyeMist® is not a compounded product, contains only water and does not cause burning or blurring."

Philip Y. Paden, MD

"I have been prescribed contact lenses but always found them extremely uncomfortable and my eye doctor diagnosed me as 'unable to tolerate' them. That all changed when she gave me a sample of Nature's Tears EyeMist. Now I can wear contacts all day long with no discomfort at all."

"I started keeping this product by my computer because I had a problem with my eyes burning and getting tired. A two-second mist takes the discomfort away immediately. My productivity is now much greater."

"I have extremely dry eyes following radiation and steroid therapy during two bone marrow transplants. Nature's Tears have been a savior. It is simple to use. Can be used quickly when needed and provides instant relief from stinging and burning."

"I have used many different drops and gels for dry eyes, most of them fairly expensive. I found them messy, hit and miss, and then had to wait for my eyes to clear before I could get back to work. I was a little hesitant at first but decided to try it. I ordered the 3-can triple deal."

"I could not believe how great this product is. One spray across the eye line - immediately, the burning is gone, my eyes felt refreshed, and I could immediately return to work. I can use it as often as I wish."

"Without this spray, my life would be very difficult. Easy to use for people that are busy and on the go. Works great! Love it!"

"I have been using Nature's Tears for 6 years after I was diagnosed with Sjogren's Disease so my eyes are terribly dry, especially at night."

"No poking yourself in the eyes, no twisting off plastic caps, works a charm."

"My eyes get dry when I drive but I can safely use this spray while driving. It doesn't make things blurry and you don't have to pull over to put in drops, then wait for your vision to return to normal."

"Relieved the redness and itchy eyes, much better than eyedrops, you just hold the little bottle 8" from your eyes and spray for about three seconds and the mist does its job."

"Bio-Logic Aqua Research is committed to 'Earth's Human Mission' with important education about your vision and health. Learn more and be well!"

Nature's Tears® EyeMist®

Absolute Premium Standard®
Bio-Logic Aqua®
tissue culture grade water

Did you know? The Tear Film Covering Your Eyes Is 99% WATER!

• Do your eyes feel dry or tired? Do your eyes burn, itch or feel grainy? Do you experience frequent headaches or blurred vision? Are you bothered by discomfort from computer screens and contact lenses? A dehydrated tear film (loss of natural water or moisture) could be the cause.

• What are the most common causes of tear film moisture loss (dry eye)? Dry air, contact lenses, computers, forced-air heating and air-conditioning, air pollution, prescriptions, aging, and just being alive on Earth (See "Vision Complaints").

• What should I do when my tear film becomes too dry? When tear film moisture becomes depleted, the one substance it needs most is a WATER (not formulated chemicals or saline).

• Is there a water product that supplements lost tear film moisture? Only one! Nature's Tears® EyeMist® with 100% all-natural, pH balanced (6.49) Bio-Logic Aqua® tissue culture grade water.

• Should I stop using my eye drops? Formulated chemical eye drops trap and seal moisture but do not supplement natural tear film moisture. Eye drops can flood the tear film and wash away beneficial components such as lipids, electrolytes, antibodies, proteins and WATER! It is suggested that when you use eye drops, apply Nature's Tears® EyeMist® first. Nature's Tears® EyeMist® is safe and effective between eye drop applications.

• Are there other advantages to misting? An EyeMist® is easy and convenient to apply, with no eyelid lifting. Nature's Tears® EyeMist® does not flood the tear film, drip or wash away beneficial tear film components. No burning or blurred vision!

- Does not "run" eye make-up! ◀
- 100% safe for all ages.
- No additives, chemicals, allergens or preservatives.
- Non-saline.
- Apply as often as desired.
- Four-year shelf life.

ALL-NATURAL

Nature's Tears® EyeMist® Nature's Tear Film: Important New Discovery

The eye's delicate tear film is a complex, three-layered structure covering the surface of the eye. The tear film, upon which your vision depends, is 99% water. When the tear film's middle (aqueous or water) layer loses all-natural water/moisture, dry eye and discomfort may result. Chemical eye drops could flood the natural tear film and wash away the aqueous layer's remaining water, lipids, proteins, electrolytes and antibodies.

NATURE'S TEARS® EyeMist® does not flood the tear film. When applied to the surface of the eye as an ultra-fine mist, the patented EyeMist® instantly adds supplemental water (moisture) to the aqueous layer, replicating the air's natural humidity while leaving the natural tear film structure intact.

NATURE'S TEARS® EyeMist® is not a chemical eye drop. The EyeMist® contains 100% Bio-Logic Aqua® tissue culture grade water (TRADE SECRET – Absolute Premium Standard™); pure, all-natural, pH-balanced and biocompatible with the natural tear film. The micron-mist instantly re-hydrates the tear film while also moisturizing the skin of the eyelids and the skin around the eyes.

NATURE'S TEARS® EyeMist® may be applied as often as desired, with no burning or blurred vision, and without lifting the eyelid or disrupting most activities. Contains no chemicals or preservatives. May be used with all other eye care products. Will not "run" cosmetics. Suggested for eye irritation caused by dry eye, computer vision syndrome, contact lenses, allergies, airline travel, LASIK eye surgery, tired eyes, burning, itching and red eyes, perspiration, occupational health, etc. Safe for infants. Four-year shelf-life.

Preservative and chemical free – Sterile – Non-allergenic – Contact lens safe. With "bag-in-can technology," contents remain sterile even after many applications.

VISION COMPLAINTS

- Dry eyes. • Contact lenses. • Allergies.
- Computer vision syndrome. • Dry indoor air.
- Car or truck dry eye. • Smoke, dust, wind or pollution.
- Post-LASIK. • Airline travel. • Sports/perspiration.
- Climate change. • Occupational hazards.
- Dry eye complaints from medications, diabetes, lupus, scleroderma, Sjogren's, cataracts, macular degeneration, etc.

PATENT

Abstract from Patent # US 7,524,511-B1, April 28, 2009: "A method and kit for moisturizing the eye in which water is administered in an amount below that which causes flooding of the eye and removal of the normal tear film."

APPLICATION / DIRECTIONS

Nature's Tears® EyeMist® creates a humid mist around the face that naturally moisturizes the eyes and facial skin (For demonstration, visit www.EyeMist.com).

1. With eyes open, hold canister at side of face, near eyes.
2. Press top of canister to release mist.
3. With canister 8 to 12 inches from face, move across eyes in a 1 to 2 second sweep.
4. For natural humidity absorption, do not mist closer than 8-inches.
5. Brief blinking is OK.
